Course number and title: 26-EIH-742 Practice in occupational Exposure Assessment II
Graduate Credits: 3
Instructor(s) in-charge: Tiina Reponen, PhD
Course type (underline all that apply): Laboratory Field Projects
Required or Elective: Required

Course Schedule:
- Lecture: 1 hour per week ___ meetings
- Laboratory: 3 hours per week
- Discussion: ___ hours per week ___ sessions
  ___ hours for informal discussion
- Field Work: ___ hours per week ___ hours per survey/project
- Outside Study: ___ hours per week
- Office Hours: ___ as needed___________

Course Assignments:
- Homework: ___ assignments
- Exams: ___1__ midterms / finals
- Reports: ___8__ required
- Project: ___1__ required

Grading Policy:
0.5 x grade from final exam + 0.5 exercises (average grade from all exercises)

Course Prerequisites:
26-EIH-741 Practice in Occupational Exposure Assessment I

Catalog Description:
Assessment of human exposure to chemical and physical occupational environment hazards: bioaerosols, heat stress, noise, chemicals. Exposure control through ventilation.

Textbook and Any Related Course Materials:

Blackboard:
In use

Topics covered:
- Dilution ventilation and gaseous tracer measurements (lecture)
- QA/QC (lecture)
- Heat stress (lecture and exercise)
- Bioaerosol Sampling (lecture and exercise)
- Bioaerosol Analysis (lecture and exercise)
- B-glucan and endotoxin (lecture)
- Visit to NIOSH (GC/MS, XRD, Emergency response facility)
- Noise (lecture and exercise)
Course Goals (and Program Outcomes):
1. Understand theory of various methods for the assessment of human exposure to chemical & physical occupational hazard.
   (A1, B1, B2, C1,D1, D4, D5, J2)
2. Demonstrate ability to perform tasks related to exposure assessment and control of exposures by use of ventilation through laboratory exercise performed in teams. (D5, D6, F1, F2, G3, G4, J1, L1)
3. Demonstrate ability to analyze and interpret data on exposure monitoring. (E1, H1, H2)
4. Demonstrate effective written communication. (G1)
5. Demonstrate effective oral communication. (G1)

NOTE: The ABET Program outcome is shown as a capital letter; the number designates the program specific outcome.

Evaluation Criteria:
1. Theoretical knowledge is evaluated through the final exam.
2. Practical knowledge is evaluated by grading the student performance in the laboratory exercise. Grading criteria include familiarization with the exercise beforehand, initiative, and mastering the use of equipment.
3. Skills in data analysis and data interpretation are evaluated by grading the laboratory reports. This includes grading of the report on exercise “Computer Data Analysis” and grading all the “Discussion” part of all reports.
4. Written communication is evaluated by grading the laboratory report. Grading criteria include the writing style, proper use of English, format of the report and proper use of references.
5. Oral communication is evaluated by grading the oral presentation in exercise 9. Grading criteria include quality and clarity of the slides and the oral presentation (such as speaking in clear sentences and at the level which could be heard, answering questions with confidence)

Grading sheets for laboratory reports and oral presentation are given to students, TAs and instructors at the first lecture and available in the blackboard.

Relation to Program Educational Objectives: This is a required course for all Comprehensive Practice majors. The course contributes to the following Program Educational Objectives, as shown:

<table>
<thead>
<tr>
<th>Program Educational Objectives</th>
<th>Contribution</th>
</tr>
</thead>
<tbody>
<tr>
<td><em>X</em> Fundamental Knowledge</td>
<td><em><strong>40</strong></em>%</td>
</tr>
<tr>
<td>Hygiene Science</td>
<td>40%</td>
</tr>
<tr>
<td><em>X</em> Design Skills</td>
<td>25%</td>
</tr>
<tr>
<td><em>X</em> Professional Skills</td>
<td>25%</td>
</tr>
<tr>
<td><em>X</em> Life-long Learning</td>
<td>10%</td>
</tr>
</tbody>
</table>

NOTE: EOH faculty define Hygiene Science as all the Knowledge Elements other than the Basic Sciences; Design skills are those necessary to solve real world problems. Professional skills are those that involve teams, management, leadership, written and oral communication, approach to stakeholders and ethics; life-long learning is demonstration of the need for continuing professional development.

Program outcomes and how they are covered in this course

For each ABET IH Program Outcome (A through L), the EOH Educational Outcomes are shown below. Upon completion of this course, students will have had the opportunity to acquire knowledge (K), skills (S) and attitudes (A) associated with each of the Educational Outcomes, as noted by underlining. Where the educational measurable outcome contributes strongly to the ABET Program Outcome, the K/S/A is shown in upper case; where the contribution is average, the k/s/a is shown in lower case letters. (Note, use the Contribution to Knowledge and Professional Skills estimates above to guide your decision.)

A. Identify agents, factors and stressors generated by and/or associated with
defined sources, unit operations and/or processes:

Identify potential health hazards of workplace processes and operations

B. Describe qualitative and quantitative aspects of generation of agents, factors and stressors:

Describe the underlying processes of the generation of hazards in occupational and environmental settings

Describe qualitative and quantitative aspects of hazards associated with specific occupational or environmental sources

C. Understand physiological and/or toxicological interactions of physical, chemical, biological and ergonomic agents, factors and/or stressors with the human body:

Understand the relation between exposures and health outcomes

Compare and contrast the potential for differences in response to hazards due to personal factors among some subjects at risk of exposure and the subsequent need to modify programs and practices

D. Assess qualitative and quantitative aspects of exposure assessment, dose-response, and risk characterization based on applicable pathways and modes of entry:

Describe how to evaluate potential adverse outcomes of chemical or physical exposures, based on similarity of the exposure to documented hazards

Describe occupational hygiene aspects of emerging technologies

Describe the basic principles of conducting sampling and analysis for exposure assessment

Describe the basic principles of evaluating engineering and non-engineering controls to reduce exposure

Develop and implement an exposure assessment plan to evaluate potential hazards and existing controls

Gather, manage and analyze quantitative (e.g., measurements of exposure or system performance) and qualitative (e.g., written programs) data to evaluate potential hazards and existing controls in order to reduce risk

E. Calculate, interpret and apply statistical and epidemiological data:

Apply epidemiologic and/or statistical concepts to the interpretation of exposure data

F. Recommend and evaluate engineering, administrative and personal protective equipment controls and/or other interventions to reduce or eliminate hazards:

Identify and recommend appropriate methods to reduce exposure (using engineering controls, personal protective equipment or administrative controls), or deficiencies in written programs and policies
Design work process/practice interventions

G. Demonstrate an understanding of applicable business and managerial practices:
   - Produce accurate oral and written reports, including descriptions of occupational processes and activities, exposure assessment plans and evaluation of occupational and environmental work settings
   - Describe approaches to interact with higher-level decision makers in various management structures
   - Manage resources effectively
   - Display effective leadership

H. Interpret and apply applicable occupational and environmental regulations:
   - Understand, interpret and apply occupational and environmental regulations
   - Apply guidelines, standards and laws in interpreting qualitative and quantitative data for exposure assessment for risk characterization

I. Understand fundamental aspects of safety and environmental health
   - Apply the professional code of ethics to a scenario

J. Attain recognized professional certification
   - Explain the importance of ethics in the practice of occupational and environmental hygiene
   - Understand the need for and resources available for continuing professional development after graduation
   - Describe the requirements to obtain professional certification

K. Conduct a research activity resulting in a report that demonstrates mastery of the subject and high level of professional and public communication skills
   - Design a research question, develop a plan and conduct research
   - Communicate effectively with a variety of stakeholders (e.g., labor, management, government, peers, safety and health professionals, allied professionals)
   - Produce a technical scientific report on research

L. Demonstrate advanced qualitative and quantitative problem-solving Skills
   - Function effectively as part of a multidisciplinary team to investigate and propose a solution to an exposure hazard in a workplace

**NOTE:** Students provide feedback on individual courses through the end-of-class Department and Division evaluation survey instrument. This instrument provides feedback on the course material, organization and presentation, and perceived contribution of the course to the achievement of Program Outcomes. In addition, feedback is received from the continuing, semi-annual Question-feedback process during which students identify Best Learning Experience, Session/presentation that was an endurance test, What would make life as a student better?, If I could do it over, I would…, Opportunities I would like to have but don't seem to be available, Opportunities I would like more of, Aspects of the program the faculty should consider eliminating, Worst part of the UC program, Best part of the UC program, Other comments. A Ph.D. and M.S. student participate in Division faculty meetings. Exit surveys are conducted by the University and the Division as part of the requirements for graduation. All students are urged to participate fully in each of these activities in order to improve the educational experience.
