### Course Goals and Outcomes Form

**Course number and title:** 26-ENV-703 Environmental Health Seminar  
**Graduate Credits:** 1  
**Instructor(s) in-charge:** Shuk-Mei Ho, Ph.D.  
**Course type (underline all that apply):** Lecture, Laboratory, Field Projects  
**Required or Elective:** Required

| Course Schedule | Lecture: 1 hours per week | 10 meetings  
| Discussion: 1 hours per week | 10 sessions  
| |  hours for informal discussion  
| Field Work |  hours per week |  hours per survey/project  
| Outside Study: 0 hours per week |  
| Office Hours: none |  |

| Course Assignments: | Homework: 0 assignments  
| Exams: 0 midterms / finals  
| Reports: 0 required  
| Project: 0 required |

**Grading Policy:**  
Attendance at both the lecture and the discussion is required in order to successfully complete the course. Excused absences may be granted by Graduate Studies; if unable to attend the lecture, the on-line recording of the session should be accessed.

**Catalog Description:**  
Lectures and discussions covering a broad range of problems in environmental health led by guest lecturers considered to be leaders in their field.

**Textbook and Any Related Course Materials:**  
None

**Blackboard:**  
None

**Topics Covered:**  
Topics covered vary by quarter. Complete listings are maintained by the Director's office staff and posted to the website www.eh.uc.edu. Each seminar presentation is 1 hour, followed by a 1 hour discussion session open only to students.
Course Goals (and Program Outcomes):
1. Students will gain an understanding of the topic presented (B1, C1, C2, D1, D2, D3, E1)
2. Students will be able to discuss the importance of the topic and relate it to environmental and occupational health (B2, C2, J2)
3. Students will understand the implications of the topic to their discipline (J2)

Evaluation Criteria:
Attendance sign-in is required at both sessions.

NOTE: The ABET Program outcome is shown as a capital letter; the number designates the program specific outcome.

Relation to Program Educational Objectives:
This is a required course for all Comprehensive Practice majors. The course contributes to the following Program Educational Objectives, as shown:

<table>
<thead>
<tr>
<th>Fundamental Knowledge</th>
<th>Hygiene Science</th>
<th>10%</th>
<th>Basic Science</th>
<th>75%</th>
</tr>
</thead>
<tbody>
<tr>
<td>Design Skills</td>
<td>0%</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Professional Skills</td>
<td>0%</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Life-long Learning</td>
<td>15%</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

NOTE: EOH faculty define Hygiene Science as all the Knowledge Elements other than the Basic Sciences; Design skills are those necessary to solve real world problems. Professional skills are those that involve teams, management, leadership, written and oral communication, approach to stakeholders and ethics; life-long learning is demonstration of the need for continuing professional development.

Is there a TA?  Yes  No

Is computer use expected? Yes  No

Program outcomes and how they are covered in this course
For each ABET IH Program Outcome (A through L), the EOH Educational Outcomes are shown below. Upon completion of this course, students will have had the opportunity to acquire knowledge (K), skills (S) and attitudes (A) associated with each of the Educational Outcomes, as noted by underlining. Where the educational measurable outcome contributes strongly to the ABET Program Outcome, the K/S/A is shown in upper case; where the contribution is average, the k/s/a is shown in lower case letters. (Note, use the Contribution to Knowledge and Professional Skills estimates above to guide your decision.)

A. Identify agents, factors and stressors generated by and/or associated with defined sources, unit operations and/or processes:
   Identify potential health hazards of workplace processes and operations
   K  S  A  k  s  a

B. Describe qualitative and quantitative aspects of generation of agents, factors and stressors:
   Describe the underlying processes of the generation of hazards in occupational and environmental settings
   K  S  A  k  s  a
   Describe qualitative and quantitative aspects of hazards associated with specific occupational or environmental sources
   K  S  A  k  s  a

C. Understand physiological and/or toxicological interactions of physical, chemical, biological and ergonomic agents, factors and/or stressors with the human body:
   Understand the relation between exposures and health outcomes
   K  S  A  k  s  a
   Compare and contrast the potential for differences in response to hazards
due to personal factors among some subjects at risk of exposure and the subsequent need to modify programs and practices

D. Assess qualitative and quantitative aspects of exposure assessment, dose-response, and risk characterization based on applicable pathways and modes of entry:

- Describe how to evaluate potential adverse outcomes of chemical or physical exposures, based on similarity of the exposure to documented hazards
- Describe occupational hygiene aspects of emerging technologies
- Describe the basic principles of conducting sampling and analysis for exposure assessment
- Describe the basic principles of evaluating engineering and non-engineering controls to reduce exposure
- Develop and implement an exposure assessment plan to evaluate potential hazards and existing controls
- Gather, manage and analyze quantitative (e.g., measurements of exposure or system performance) and qualitative (e.g., written programs) data to evaluate potential hazards and existing controls in order to reduce risk

E. Calculate, interpret and apply statistical and epidemiological data:

- Apply epidemiologic and/or statistical concepts to the interpretation of exposure data

F. Recommend and evaluate engineering, administrative and personal protective equipment controls and/or other interventions to reduce or eliminate hazards:

- Identify and recommend appropriate methods to reduce exposure (using engineering controls, personal protective equipment or administrative controls), or deficiencies in written programs and policies
- Design work process/practice interventions

G. Demonstrate an understanding of applicable business and managerial practices:

- Produce accurate oral and written reports, including descriptions of occupational processes and activities, exposure assessment plans and evaluation of occupational and environmental work settings
- Describe approaches to interact with higher-level decision makers in various management structures
- Manage resources effectively
- Display effective leadership

H. Interpret and apply applicable occupational and environmental regulations:

- Understand, interpret and apply occupational and environmental regulations
environmental regulations  K S A k s a
Apply guidelines, standards and laws in interpreting qualitative and quantitative data for exposure assessment for risk characterization  K S A k s a

I. Understand fundamental aspects of safety and environmental health  K S A k s a
Apply the professional code of ethics to a scenario  K S A k s a

J. Attain recognized professional certification  K S A k s a
Explain the importance of ethics in the practice of occupational and environmental hygiene  K S A k s a
Understand the need for and resources available for continuing professional development after graduation  K S A k s a
Describe the requirements to obtain professional certification  K S A k s a

K. Conduct a research activity resulting in a report that demonstrates mastery of the subject and high level of professional and public communication skills  K S A k s a
Design a research question, develop a plan and conduct research  K S A k s a
Communicate effectively with a variety of stakeholders (e.g., labor, management, government, peers, safety and health professionals, allied professionals)  K S A k s a
Produce a technical scientific report on research  K S A k s a

L. Demonstrate advanced qualitative and quantitative problem-solving skills  K S A k s a
Function effectively as part of a multidisciplinary team to investigate and propose a solution to an exposure hazard in a workplace  K S A k s a

NOTE: Students provide feedback on individual courses through the end-of-class Department and Division evaluation survey instrument. This instrument provides feedback on the course material, organization and presentation, and perceived contribution of the course to the achievement of Program Outcomes. In addition, feedback is received from the continuing, semi-annual Question-feedback process during which students identify Best Learning Experience, Session/presentation that was an endurance test, What would make life as a student better? If I could do it over, I would…, Opportunities I would like to have but don't seem to be available, Opportunities I would like more of, Aspects of the program the faculty should consider eliminating, Worst part of the UC program, Best part of the UC program, Other comments. A Ph.D. and M.S. student participate in Division faculty meetings. Exit surveys are conducted by the University and the Division as part of the requirements for graduation. All students are urged to participate fully in each of these activities in order to improve the educational experience.
