Hobbies
Outside of clinical responsibilities I enjoy reading for leisure, travel, and watching and playing sports. The most recent books I have read include the Game of Thrones series. In addition to traveling to Peru for volunteer work, that summer I hiked a trail to Machu Picchu, visited Cuzco, Peru, London, England, Paris, France, and Bruges, Belgium. A lifetime goal is to attend a baseball game at every Major League Baseball stadium and collect a small souvenir.

Personal Statement
At its root, internal medicine is driven by personal relationships and patient well-being. A physician mentor of mine once told me that every doctor is a St. Martin de Porres, a Peruvian who devoted his life to the sick, poor, and neglected. The motif behind this icon, my Jesuit educational motto ‘Men for Other, and cultural upbringing taught me to care for individuals and to respect other’s values. I have embodied this through my personal demeanor and outreach activities during high school, college, and medical school. In the end, my approach to medical training has been centered on the values of humanism that I was brought up with, in addition to my inherent character strengths.

Why I Chose Cincinnati
Quite simply, the people. Cincinnati achieved my core benchmarks for a residency (innovative ambulatory curriculum, strong fellowship placement, great location, facilities, etc.), but I chose Cincinnati because the program leadership truly cares about the well-being and career aspirations of the residents.

Personal Statement
Becoming a physician is hard work and I know the dedication it takes to become a good physician. My goal is to become a great physician. Having grown up with the influences and experiences that I have had, I know I have the dedication to do the hard work required to reach that goal. I want to be someone that patients and their families can trust and I sincerely want to make a difference in their lives.

Why I Chose Cincinnati
I was very interested in the innovative program as well as the patient-centered bedside rounds. I really liked everyone I met during my interview and enjoyed my time in Cincinnati.

Personal Statement
I plan to return to my hometown in rural Georgia to practice as an internist. The people who will be my patients are more than just people seeking my help as a physician. They will be my former teachers, my fellow marching band members, my old bosses, my classmates, my neighbors, my friends. These people do not have access to a large teaching hospital with the latest technology. They cannot afford to take their aging mothers and fathers far from home to get medical care. They need an internist who they trust, who they know will care for them and about them, and who they know has been trained to keep searching for the answer. I want to be that internist.

Why I Chose Cincinnati
I chose Cincinnati because I want to practice patient-centered primary care and the program lends itself well to learning just that. Everyone I met on the interview seemed committed to the program, which I thought spoke highly of the quality of learning and care. Cincinnati itself has many things that I like in a city including access to excellent museums, sports, and parks. I’ll be sad to leave my beach life in Savannah, but maybe off-time by the river will be a nice substitute.

Hobbies
Modern science fiction novels, teaching, and Husker football.

Personal Statement
As a physician, I hope to spend time communicating with my patients while unraveling their full story, from performing the initial history and physical examination to educating the patient regarding their diagnosis and treatment options. In the future, I also hope to continue in an educational setting by working with other medical students or residents in addition to my patients. I cannot think of a more powerful way to affect the future of medicine than by sharing knowledge with student physicians.

Why I Chose Cincinnati
When first looking at residency programs, I knew I wanted to be closer to the Midwest as the majority of my family was in Iowa. During my interview at Cincinnati, I truly felt welcomed by other residents and staff. I love that the program focuses on interactive resident education while always reinforcing the importance of patient-centered medicine. I can't wait to spend the next three years here, and I look forward to working hard and making some great memories with you all in the process!

Hobbies

aviation/piloting, distance cycling, mid-century modern architecture & design, healthcare for LGBT patients, global health and healthcare delivery systems.

Personal Statement

As we generate ever increasing quantities of data about patients, we need better tools for sharing and analyzing the data to make clinical decisions. We need systems that allow researchers to aggregate anonymized data to help establish best practices, improve outcomes, and reduce long-term costs. These aren’t merely administrative concerns; better tools will enable clinicians to spend more time with patients, make more informed decisions, and strengthen the therapeutic alliance. These are challenges that have solutions. The problems of healthcare access seem daunting. The system is intricate, and the level of complexity increases with each new therapeutic advance. I’m looking forward to the challenge.

Why I Chose Cincinnati

When I was evaluating residency programs, my criteria ranged from extremely specific (must use Epic!) to thoroughly vague (it has to “feel” right). The University of Cincinnati was by far the most innovative program I’d seen, and I truly had the sense that the UC Internal Medicine program is uniquely focused on changing how to educate residents and how medicine is practiced.

Hobbies
Music- playing violin, learning how to play guitar;
Catholic Church- learning about the Church’s teaching, attending events at area churches.

Personal Statement
I know my patients are my most valuable resource in learning to become an exceptional physician. From them I have learned lessons not found in journals and textbooks. Seeing patients who are farmers during my rural preceptorship in Fredericksburg, TX, indigent patients while volunteering at HOMES Clinic and rotating in Harris Health facilities, and patients from affluence here in Houston has instilled in me a growing awareness of diverse social and emotional circumstances. These patients have taught me that despite the great intellectual and physical demands placed on a physician, the most privileged responsibility I will have is to be their advocate.

Why I Chose Cincinnati
Cincinnati just felt right. Having a strong interest in primary care and learning how excellent and innovative UC is definitely played a part in my decision, but when it comes down to it, I felt at home during my interview. I have yet to find another program as patient-centered as UC. I feel this program will purposefully enhance my knowledge and abilities not only for the sake of my career, but for the sake of my patients.

Outdoor activities with my children, fishing, camping, hiking, hunting, lacrosse, football, coaching peewee football, tinkering with computers, working on cars.

Personal Statement
Internal medicine is my first and only choice for a career in medicine. I believe the many facets of my personality and life experience; father, husband, leader, scientist, teacher, student, brother, son, people person, team player and problem solver has prepared me for a successful career in internal medicine. A career where I will be able to contribute academically, train future physicians and compassionately care for my patients.

Why I Chose Cincinnati
I chose Cincinnati because I got know the city, university and department while going to medical school here. My family and I came to really love the "Queen City". As a medical student here I got lots of interaction with faculty and attendings in the department and knew this would be a good fit for me.

Personal Statement
I feel very fortunate that I have had the experience of surgical training as it has provided me with insight. The challenging nature of the training forced me to be introspective and ask myself what I enjoy most. I know now that what I enjoy most is medically managing patients and building long term relationships with patients. I also realized the strong passion I have for research. I am now looking for an internal medicine program that will provide me with strong clinical training as well as the opportunity of pursing basic science or clinical research. I would like to enter academic medicine at the conclusion of my training with the goal of advancing medical science through research while providing better care for my patients.

Why I Chose Cincinnati
I chose Cincinnati because of the people. Everyone I met on my interview day really seemed to enjoy the program and the city. I couldn’t think of a better place to do my training and am excited.

Personal Statement
I grew up in a country defined by turmoil. I have had the unfortunate exposure to wars and chaos. For as far as I can remember I have watched horrifying images of wounded civilians in desperate need of care and felt helpless in front of their suffering. This experience prompted me to develop a sense of obligation to provide help. It was early on during my school years that I developed a fascination to human biology and decided that I want to channel my desire to help towards the medical field. I started off by joining the school’s scout which introduced me to basic care principles. I then went on to enroll in Red Cross courses and just as I was starting Medical School I was fortunate enough to work as a volunteer at Saint Jude children’s cancer center. That burning drive to help intensified during my time spent at the center and it was then that I realized how I wanted to channel my energy. I wanted to become an Oncologist.

Hobbies
I am a 'Kathak' dancer. Kathak is one of the eight forms of classical Indian dance. It originated with Kathakas, or storytellers, enacting mythological tales with hand gestures and facial expressions. I trained for several years in India and here, and completed my 'Rangapravesh', or graduation, in 2009. I continue to practice and to incorporate Kathak into my dance performances. I was also trained in piano and enjoy playing in my spare time.

Personal Statement
I would like to train in a primary care program that also encourages community outreach; I did not, however, always envision as such. I spent the summer leading up to my first year of medical school in India, where I observed a physician attend to a poor family with two children who were far below the growth curve. Differences in the availability of and access to health care between the rich and the poor are stark in India; the family was unable to afford even basic vaccinations for their children. Primary care physicians must be thoughtful and creative in their approach to medicine – the attending physician recommended that each of the children be given one large banana to eat every day. As I observed the physicians work to overcome challenges, I couldn’t help but wonder if the same issues of affordability and access to quality primary and preventive care existed back home. How might pursuing a career in internal medicine allow me to combine my knowledge and medical skills with my multicultural background and experiences in order to find innovative ways of caring for my patients?

Why I Chose Cincinnati
I chose Cincinnati because first, this program will provide me with strong inpatient training while still emphasizing ambulatory experience. It is a good fit for me, as I ultimately see myself as an outpatient primary care provider but would like to have a well-rounded experience in residency. Second, this program stood out for its emphasis on patient centered care, which resonated with me. Third, the residents I met here seemed very happy with the program, which was not always the case at other schools. And lastly, I have family ties to Cincinnati, which is a bonus!

Personal Statement
I am inspired by what medicine can do for patients and believe that I will play an important role during residency. I have always prided myself on my work ethic and dedication. The quality of patient care is always the highest priority, and I am committed to taking as much time as necessary to ensure everything is done correctly. With prior experience leading nutrition and cooking classes for AmeriCorps, I am ready and able to take on a leadership role when it is warranted. I also have experience working as a nurse's aide, so I both understand and respect the value of all members of the medical team. Everyone plays an essential role, and the team working together effectively is critical.

Why I Chose Cincinnati
Cincinnati has a tremendous amount of innovative features including the bedside rounds, academic half-day, and long block. What really impressed me, however, was the program's constant internal evaluation and improvement. Everyone I met throughout my visit was also very welcoming and engaging. I feel Cincinnati gives me the best opportunity to develop into a confident and resourceful internist.

Hobbies
During my free time my greatest joys are being with family and spending time with my church. Reading books about both history and fantasy is one of my favorite ways to pass time. Playing music on the piano and guitar is another of my favorite hobbies. I also have a great appreciation for the opportunity to be outdoors and have enjoyed hiking and learning to play disc golf since I have been in medical school.

Personal Statement
I love Internal Medicine first for the opportunity it gives of following patients long-term - of getting to know something of their story, their family, and their plans for the future. This, I believe, will give me the best opportunity to help patients navigate their health, their illnesses, and their relevant hopes and fears. In my opinion, this is the greatest privilege I could hope to have as a doctor.

Why I Chose Cincinnati
I was thoroughly impressed by the faculty and residents I met during my interview at the University of Cincinnati, especially by their obvious camaraderie and their emphases on patient-centered care and strong academics. Additionally, Greater Cincinnati is the place I’ve called Home for most of my life, and I am very excited to have the opportunity to come back. Plus, I love Skyline chili and the Reds.

Five-time NCAA All-American - swimming.
Member of four Division III NCAA champion swim teams.

Personal Statement
As I entered the patient’s room, I encountered an emaciated man appearing much older than his age who managed a grief-stricken smile as he attempted to outwardly conceal his illness. I introduced myself to him and met his lifetime friend who was helping him cope with his terminal diagnosis. I began to converse with the patient and was overwhelmed by the lucidity of his thoughts, the depth of insight and reflection he was sharing with me about his life, and the strength I heard in his voice as he clearly explained to me what he knew about his physical condition. It became clear to me that this patient did not want my insight about his disease; rather he needed my empathy and support.

Why I Chose Cincinnati
I chose UC because of the innovative structure of the program, the objective approach to education and feedback, the university environment, and my fondness for the city of Cincinnati.

Hobbies
Playing Guitar, Cooking, Snowboarding, Board Games

Personal Statement
I have always envisioned myself practicing as a hybrid between the fields of pharmacy and medicine. Internal medicine is the logical extension of that goal. I believe this path will further my understanding of the cause of and interventions to disease, while allowing me to enjoy the largest scope of practice. In this capacity, I can foster the comprehensive dynamic where patient and physician understand each other. My belief is that this unique relationship benefits both parties in the initial steps of diagnosis, and ultimate patient well-being.

Why I Chose Cincinnati
I feel there is great value in learning the trade of the traditional physician which primarily involves the outpatient setting. I felt that Cincinnati offered the best outpatient experience with ambulatory long block while not sacrificing inpatient training experiences. I also have a strong interest in medical education and Cincinnati seemed the ideal place to train in that regard.

Hobbies
As far back as I can remember, I have always had a fondness for dance. I danced in the Latin Dance Club in high school, served as president of Bucknell's hip-hop dance team, and enrolled in ballroom dance classes this year. I also have an appreciation for the arts in general, and have thoroughly enjoyed the opportunity to see the great Cleveland Orchestra play on numerous occasions. Lastly, I have a great love for traveling and have been fortunate to leave footprints in four continents.

Personal Statement
The promise of a fruitful career in Internal Medicine has been paved by several physicians whom I admire not only for their bedside manner but also because of their involvement in our medical school as teachers and mentors. As a physician, I too have aspirations of being affiliated with an academic center where I will have the opportunity to teach medical students and expand upon my experiences in research. I have dedicated a significant amount of time to honing my skills in the basic science laboratory environment, both as a research technician and in my thesis research. However, I am interested in adjusting my gaze to focus more on clinical research, which would align my clinical practice directly with efforts to improve outcomes of patient care.

Why I Chose Cincinnati
I chose Cincinnati for the balanced perspective on training residents in inpatient and outpatient medicine. With my interest in primary care, I was looking for a program that offered such well-rounded training. I also wanted to be affiliated with the EIP so that I could build skills in outcomes research and medical education. And, to be completely honest, I was won over during my interview day by the passion demonstrated by the faculty (i.e. Dr. Warm) for the program and the down-to-earth, earnest, good people who greeted and welcomed us throughout the day. It felt like the right fit for me.

Personal Statement
As a high school student, I interned at the J. Craig Venter Institute in a human genome sequencing lab where I fell in love with research. The possibilities of gene sequencing were endless. We used cool robots that rapidly sequenced hundreds of DNA plates around the clock. This is when my fascination medical device design first started. Although I had the privilege to dabble in this area during college, I was drawn to the patient aspect of research. I wanted to see how my research projects touched the lives of patients. I had that chance when I designed and developed a hand orthotic for patients suffering from Writer’s Cramp. During my pilot study I absolutely loved working with patients. I was humbled as I listened to stories about their struggle to overcome disease and I wanted to be directly involved with their care. This is when my transition from a typical engineer to a future physician started.

Why I Chose Cincinnati
Family and friends are here and I loved the program.
